GLYPH
Glyph Storage - Audio & Video Production

For more than eight years, Glyph's focus on innovation has made us a leading provider of storage for digital A/V production. As your storage needs in digital media have evolved, so has Glyph. Our labs are stocked with audio and video workstations so that we can develop great products and support you!

New - Perfectly Matched Solutions

Glyph is now working closely with leading audio and video workstation manufacturers to build storage products that are a perfect match technically, functionally and aesthetically.

The Glyph also has a wide range of standard storage solutions to suit your needs. Tabletop enclosures are stackable and brief-case portable, or you may prefer to have your gear rack-mounted.

Whether you're a Grammy™ or Oscar™ winner or home and project studio owner (or both), we have perfect solutions for your art.

Rock Solid Construction & Design

Glyph drives are the most rugged and durable units available. Each unit is built by hand to exacting specifications.

Keep It Cool

Glyph drives are built with precision-crafted ball-bearing fans of the highest quality. Why? ...to maintain the best cooling possible so theywon't melt when you hit 'em hard with the demands of digital A/V files. This truly is a stunning display of heat dissipation.

Herculean Service & Crushing Technical Support

We set the standards in the digital audio/video industry for service and tech support with Overnight Advance Replacement* and 48 hour or less in-house turnaround on most warranty repairs.

Missionaries of Compatibility

Glyph models are tested with gear from A/V industry leaders to ensure compatibility so you know it will work when you get it to its new home. What computer shopper does that?

So Mod (And Ultra Hip)

Safeguard your data with external drives. The independent power supplies and cooling systems of modular components yield greater performance and make for easier maintenance.

Glyph products are unique in look and feel and are constructed of the highest quality finish materials. Show them off with pride.

Production

fax: (607) 275-9464

Glyph has engineered new storage products that are "dialed in" for use with leading digital media workstations. These devices offer complete technical, functional and aesthetic integration with tools from Digidesign™, Mark of the Unicorn (MOTU)™ and Tascam™.

X-Project™

The Perfect Companion to your Digi 001

When Digidesign released the Digi 001™ we said, "Wow, that's really cool. We need to make a drive for that." So, we created the X-Project. The new FireWire edition of Glyph's X-Project simplifies digital audio production. There's only one button - the power button. Plug in it in, turn it on...start creating. This is the first FireWire drive designed specifically for A/V production. It is "priced" for the project studio. And it works . . . rock solid!

With the X-Project, you get the same legendary service as the professional facilities have received for years. The X-Project is also available as a SCSI device.

- **FireWire or SCSI**
- **Tweaked for A/V Performance**
- **Complete Kit for Mac (PC may require FireWire Card)**
- **Glyph Overnight Advance Replace***
- **Dual Drive Model Available**

Why We Like FireWire:

One of the things we really dig about FireWire is that it's hot-pluggable dynamic reconfiguration means that you can re-cable your peripheral devices without re-booting. Also, FireWire technology automatically mounts drives on your desktop, just connect the drive to the FireWire port on your Macintosh. And the big bonus...you still have PCI slots left for other things.

Perfectly Matched for Digi 001

MAS STOR™

The Perfect Companion for MOTU's 1296 and 2408 - Storage, Backup, CD's

Glyph has worked very closely with MOTU to develop MAS STOR: a two-rack high, two-bay, removable-drive storage solution that provides enough massive throughput to support even the most demanding multi-track recording environments.

MAS STOR the ONLY drive you'll want to use for multi-track 96kHz projects recorded with the MOTU 1296 audio interface. Configure a system that's perfect for you with the following removable drive components: 15,000 RPM, Ultra3 SCSI drive, VXA backup tape drive and/or a Plextor redbook compliant CD burner. This is complete studio media solution!

MAS STOR offers storage upgrade flexibility by adding more drives in trays! Glyph can custom configure your MAS STOR exactly for your needs.

Glyph MX Solutions

The Perfect Companion for Tascam MX2424™

Tascam has officially endorsed Glyph's drives for use with the world's most popular 24 track recorder. The reasons are simple. Glyph's SCSI technology is industry standard and offers the most robust performance for demanding punch ins/outs on all 24 tracks at once and playing across sections with high densities of editing. Plus Glyph's removable hard drive systems can be hot swapped into other Mac and PC workstations for further editing.

Glyph provides a series of different storage options in the MX line and can build the custom solution for you, the way you work.

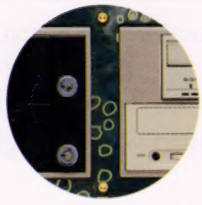
Trip

Trip™

The Glyph Trip has built a huge reputation in the A/V market. Thousands of satisfied customers are creating today's most successful sound and video projects with the Trip. The Trip is industry standard, "Monster Truck" storage with removable technology and your choice of standard configurations or completely custom built models. Use them for Pro Tools™, Final Cut™, Avid™, Media 100™ or other A/V environments.



Ego Trip™

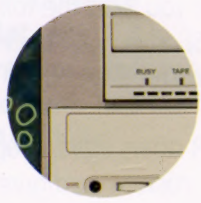
This is the Trip for that artist/engineer who need it all. You may have met someone like this... maybe once.

Configuration:

- **Two 73GB hot-swappable 10,000 rpm, optimized hard drives**
- **AIT-2 50GB native tape back up drive**
- **12x4x32x Plextor CD-RW**

Alter Ego Trip™

The black "Vader" faceplate and world's fastest hard drives set the tone for this unit. Uses cool VXA tape backup technology.



Configuration:

- **Two 18GB hot-swappable 15,000 rpm, optimized hard drives**
- **VXA 33GB native tape back up drive**
- **12x4x32x Plextor CD-RW**

Trip for ProTools™

Our best selling Trip for 24 bit- 64 track work with Digidesign's TDM systems.

Configuration:

- **Two 18GB hot-swappable 10,000 rpm, optimized hard drives**
- **AIT 25GB native tape back up drive**
- **12x4x32x Plextor CD-RW**

Fibre Trip™

The newest Trip is all fibre channel and is SAN ready. The removable hot swap fibre-channel technology is all Glyph and will provide the most robust data throughput known to man.

Configuration:

- **4 Fibre Channel Hot Swap Hard Drives.**

Petra™

Glyph now offers the "luxury sedan" of removable, multi-bay A/V storage solutions for audio and video content creators. Like all Glyph rack mount products, the rugged Petra series is sculpted out of the finest metal and aluminum materials (no cheesy plastic).

In the event of service, Petra offers removable storage, power supplies and fans so key components can be exchanged on your site so that you are more productive!

PETRA

Ready

- **Ultra Quality Construction**
- **SCSI or Fibre Channel**
- **JBOD & RAID**
- **User Swappable Components**
- **Compatible with most Audio & Video Workstations**

If quality, reliability, performance and scalability are important to your facility, Glyph Petra is the ultimate "ride" for you.

Custom Combination = Flexibility

You want it? We'll build it for you. One-space, two-space, and three-space rack enclosures ...all filled with the gear of choice. We'll help you complete your dream rig. Glyph's single-space rack enclosures are sleek and slim, yet they have lots of room for your data. You can even put hot-swappable hard drives into a single space enclosure.

Craving more flexibility? How about a removable hot swap drive and a fat backup device in one enclosure? Or you can get that CD mastering combo you've been waiting for. Select a drive capable of storing several albums or videos and the CD recorder of your choice.

www.glyphtech.com

sales: (800) 335-0345

Glyph's classic double-space rack enclosure can handle it.

Start building your legacy today.

Stand back, breathe deeply. The Glyph Trip™ - three spaces of pure, unmatched, hairy power. Fire up over six hundred gigabytes of premium, optimized storage in one triple-space enclosure. Take advantage of hot swap technology in your Trip™ and maximize your digital storage. No bad Trips with Glyph - you get what you want.
Integrate any Glyph component into your Trip™ for complete studio or touring solutions.

Small spaces or desktop work area?, No problem, build a custom rig using removable hot swap and other tabletop drives of your choice.
Custom to you.

Totally Custom

Wildfire™
FireWire CD-RW Recorder for A/V

The FireWire advantage can be summed up in three words: speed, speed, and more speed. At 400Mbps, it has 30 times more bandwidth than USB, which makes it the perfect choice for high-speed storage and serious A/V production.

- **The WildFire is a fast, reliable 3-in-1 CD-RW drive that writes at 8x, re-writes at 4x, and reads at 32x Disc At Once (DAO), Red Book Audio compliant so you can fully master your CDs**
- **4 MB buffer assures smooth transfer of your audio data**
- **Compatible with Macintosh & PCs (your PC may require a host bus adapter and software)**
- **Hot-pluggable dynamic reconfiguration means that you can re-cable your peripheral devices without re-booting**
- **Use as alternative to SCSI for a clean configuration and free up SCSI bus for other devices**

FireWire

CD Recording Gear

CD•X2™ and CD•X3™
Stand Alone CD-Duplication

The awesome CD•X2 CD Duplicator from Glyph lets you duplicate CDs fast.
You don't need a computer - You don't need software. Just drop your master in the CD•X2, drop a CDR in the other tray, and use the simple one button operation and the easy to read display to duplicate your CD. The LCD front panel operation makes it as easy as copying a floppy! Of course CD•X2 and CD•X3 will interface to a computer and burn from most CD recording software.

- **Self-contained unit - computer not required.**
- **Simple, menu-driven LCD display shows status, function, and operational options.**
- **Automatically detects original CD format for transfer to CD-R media.**
- **Play your own CDs on standard consumer CD players.**
- **Compatible with Mac OS, Windows 3.1X/95/98/NT, IBM OS/2.**
- **Supports 74 and 80 minute masters and blank CDR media.**
- **Comes with SCSI cable, terminator and blank media.**

The CD•X3 does the same cool stuff but will make up to three CD copies a time. Of course CD•X2 and CD•X3 will interface to a computer and burn from most CD recording software.

Primary Storage = Performance

Glyph hard drives are designed specifically for digital A/V recording, editing and post production, not the generic computer world. We optimize every drive for A/V production, so you can use it straight out of the box. No tweaking required. Glyph has a full range of hard drive capacities to meet all of your production needs -- from 9 gigabytes to over 150 gigabytes in one tabletop enclosure ...our Glyph-goodness is for you.

Glyph provides the throughput to let you make your work scream. Are you looking for SCSI, SCSI-2, Ultra-SCSI, Ultra-Wide, LVD, or Fibre-Channel, put your mind at ease ...we have it.

Backup = Security

In the digital domain it is essential to backup and archive you're projects. Keeping a copy of your data on a second hard drive is not enough, nor is it really cost-effective. A backup is a copy of your project data in a medium (like tape) other than the original. Think of it this way ... a tape, CD, or DVD disc is not likely to break when you drop it.

We also have a full range of tape formats and sizes for you including DDS-3, DLT, VXA and AIT and AIT-2 technologies.

There is no excuse, tape backup is simple. Glyph has the devices to meet your requirements.
We offer bundles of the best software in our industry for backup and archiving including Dantz Retrospect, Grey Matter Mezzo Archiver and others to ensure that backing up your work is easy. Backup your projects regularly ...unless excuses like "the dog chewed it" or, "it was abducted" are valid in your world.

Optical Drives = Multifunction

Advances in technology have seriously increased the speed and reliability of optical drives. Glyph provides you with the best CD-R or CD-RW for your pre-mastering applications by industry leaders such as Digidesign, Adaptec, Sonic Foundry, Steinberg, Emagic, and others.

No matter what your project needs are, Disc at Once (DAO) to master audio CDs, or Track at Once (TAO) for multimedia work, or you need support for digital audio extraction, Glyph has the drives for you.

Glyph also has re-writable CD Recorders (CD-RW) which allow you to use a re-writable disc as much as 1,000 times. Re-writable media can be read by any CD-RW drive or CD-ROM drives that have Multi-read capability.

Glyph's DVD-RAM drive is the next generation in drives using optical technology. Mac and PC users find it easy to use the bundled software to drag and drop data to the removable cartridge. Large capacity media makes this drive great for multi-media development and archiving. Multi-read functionality enables you to read most optical formats including CD-Recordable, CD-Rewritable, and CD-ROM media.

Tabletop Storage

www.glyphtech.com

fax: (607) 275-9464

At the Glyph we have a host of SCSI accessories to help you get the most from your SCSI bus.

Glyph SCSI switchers give you the power to have multiple hosts (samplers or computers) share a chain of SCSI devices. Why power down your systems and re-cable to switch devices if you don't have to?

Glyph supports its industry leading storage devices with high quality SCSI and Fibre-Channel interface cards. You get future scalability and the highest performance possible.

The Glyph uses only the best ingredients to provide you with maximum reliability, so you don't compromise your data integrity. Use Glyph branded cables, terminators and other accessories. Glyph cables are double-shielded, twisted pairs of primo copper, impedance matched to our specifications. Get the most from your gear, don't skimp on connectivity.
